## 1 Actors

- **Librarian**

Librarians may perform the following tasks:

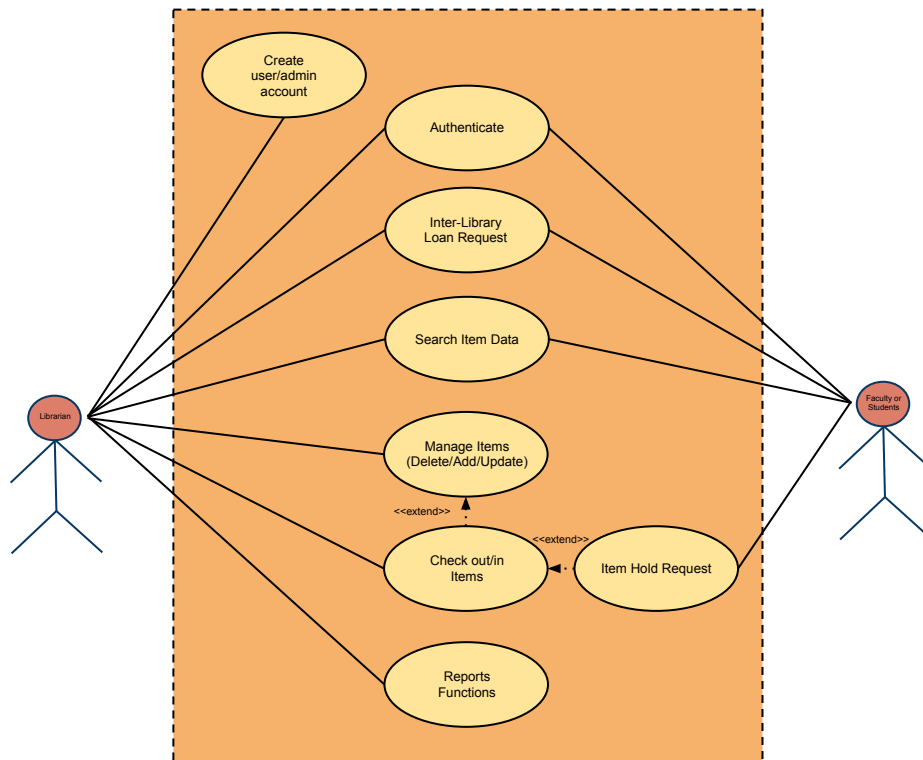

- Administrate users.
- Retrieve and read books.
- Data management of books.
- Inter-Library loan requests.
- Generate and run reports.

- **Customers**

Customers may perform the following tasks:

- Retrieve and Return books.
- Reserve books.
- Inter-Library loan requests.

Library Application Request Use Case

## **2 Stakeholders and Interests**

Various local libraries are depending on this application to work from its inception to improve management of their inventory.

## **3 Preconditions**

Librarian must be setup with an administrator account and isbn registered in database with providers.

## **4 Success Guaranteed**

(post condition) Books are properly in system.

## **5 Main Success Scenario**

1. Librarian authenticates.
2. Librarian selects new book data.
3. Librarian enters book title, id and isbn.
4. Book data is recognized and appended to inventory.

## **6 Extensions**

### **6.1**

1. Librarian cannot authenticate.
2. Librarian requests admin account.

### **6.2**

1. Librarian authenticates.
2. Librarian selects new book data.
3. Librarian enters book title, id and isbn.
4. Book data is not recognized and Librarian notified to contact provider.

## **7 Special Requirements**

Library must have a Linux/Unix or OSX based computer.

## **8 Technology and Data Variation List**

Providers must keep up with new inventory.

## **9 Frequency of Occurrence**

Varies by providers.

## **10 Open Issues**

No open issues at this time.
